Universal and easy to use

E-BOX

THE COMPLETE HOUSING FOR RAFIX 22 FS⁺ CONTROL COMPONENTS

The elegant and flat E-BOX is used where individual control elements are required at remote locations – for example emergency stop applications along a production facility or at a safety fence.

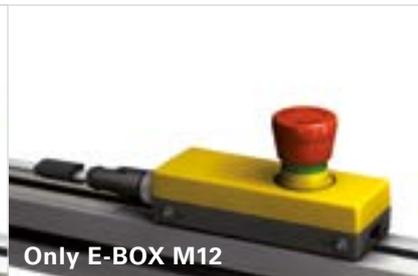

The compact dimensions of the E-BOX match the edge dimension of a 40-mm profile rail. Even assembly is configured accordingly. It is designed to be uncomplicated and fast – thanks to the modular system of housing top and bottom, contact module with switching element, actuator or the alternative complete variation with its M12 connection.

For assembly videos, see www.rafi.de/e-box.

E-BOX INSTALLATION CONCEPT

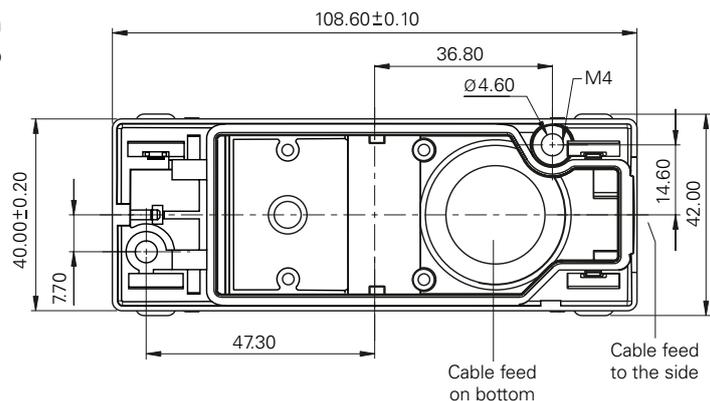

- Insert the metal clip into the notch in the profile rail (the alignment nubs on the clip provide locking, then affix with only one screw)
- The metal clip can also be screwed onto other surfaces

- Attach the bottom of the housing
- Insert the contact module
- Feed in the cable
- Contact the wire ends
- Insert RAFIX 22 FS⁺ actuator (for example emergency stop) in the top part of the housing
- Fix the actuator using the threaded ring
- Clip the housing top to the bottom
- done
- Attach the housing to the metal clip and connect the cable using the M12 plug

Hole pattern for direct installation

As an alternative to the metal clip installation method, the bottom of the housing can also be directly attached using M4 screws.

UNIVERSAL AND STABLE

PROFILE RAILS

Profile rails can be used everywhere for stable designs of all kinds, even over wide spans. As a result, they are used in many types of machines and systems: in logistics and production, in CNC machines and automatic injection moulding machines, in transport systems and conveying systems or in chassis design for robotic assembly systems. Even industrial work tables and testing tables are usually constructed using aluminium profiles. Some internationally marketed types of profiles are also suitable for use in building safety fences.

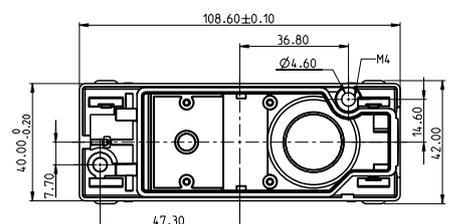

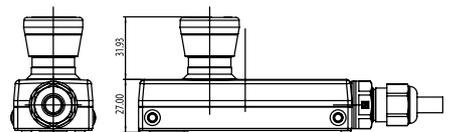

Different washers or woven screens can be used depending on the frame profile. The profile rail accessory program is generally very extensive and suitable for all types of applications.

The E-BOX installation concept is designed for compatibility with the profile rail. However, it can also be installed on cast iron, wood, plaster, concrete or other surfaces – using either the metal clip or direct installation using screws.

E-BOX MODULAR Housings

- • Extremely compact (dimensions 109 x 40 x 27 mm)
- Suitable for actuators from the RAFIX 22 FS⁺ control unit range (mounting hole \varnothing 22.3 mm)
- With yellow housing cap for emergency-stop actuators
- With grey housing cap for standard actuators, such as pushbuttons
- Fixing with the timesaving one-hole screw attachment method, particularly suitable for aluminium profile rails or alternatively by direct attachment with M4 screws
- Includes respective cable lead-in for direct cabling: side M16 or bottom: M20

E-BOX M12

→ The **E-BOX M12** is a ready, fully equipped housing including actuators and indicators. Thus, e.g. emergency stop, on-off and up / down functions, also be realized with additional status displays with the very compact dimensions of the E-BOX.

Mounting: screw the clip, fit the box, plug in, check and finished.

The E-BOX M12 can be used anywhere that single command equipment units are required at remote locations. Typically, for example, for emergency stop applications along a production facility or on the hard guard. The dimensions of the E-BOX M12 are based on the edge dimension of a 40 mm mounting rail and the mounting concept is designed accordingly.

Technical Data

→ General information

Color of housing cap see order block
